

CALCULUS COMPREHENSIVE EXAM

Spring 2019a, Prepared by Dr. Robert Gardner

February 1, 2019

NAME _____ Start Time _____ End Time: _____

Be clear and **give all details**. Use all symbols correctly (such as equal signs). The numbers in bold faced parentheses indicate the number of the topics covered in that problem from the Study Guide. **No calculators and turn off your cell phones!** Use the paper provided and **only write on one side**.

You may omit one problem from numbers 1 through 5 (which contain Calculus 1 material) and one problem from numbers 6 through 10 (which contain Calculus 2 material). Indicate which two problems you are omitting: _____ and _____.

1. Do each of the following **(1)**:

- (a) State the definition of the limit of a function (i.e., what does $\lim_{x \rightarrow a} f(x) = L$ mean?).
- (b) Use the definition of limit to prove that $\lim_{x \rightarrow a} (mx + b) = ma + b$, where $m \neq 0$

2. Do each of the following **(29,37)**:

- (a) State L'Hôpital's rule.
- (b) Determine $\lim_{x \rightarrow 0^+} (1 - 2x)^{3/x}$

3. Do each of the following **(10)**:

- (a) What does it mean for $y = f(x)$ to be a function *implicit* to the equation $F(x, y) = 0$?
- (b) Find the equation of the line tangent to $x^2 - xy + y^2 = 7$ at the point $(-1, 2)$.

4. Do each of the following **(23, 24)**:

- (a) State the two parts of the Fundamental Theorem of Calculus.
- (b) Evaluate $\int_0^1 \tan^{-1}(x) dx$ (HINT: Use parts) and indicate with a star (*) where you have used the Fundamental Theorem of Calculus in your computations. **(24, 31)**

5. (a) State the definition of *partition*, *norm* of a partition, *Riemann sum*, and *definite integral* for $\int_a^b f(x) dx$. (21)
- (b) Explain the difference between a definite integral and an indefinite integral (if any). (20, 23)
6. (a) Use the definition of $y = \tan^{-1} x$ (in terms of the tangent function) and implicit differentiation to find $y' = \frac{d}{dx}[\tan^{-1} x]$.
- (b) Evaluate $\int \frac{dx}{x^2 - 2x + 5}$. (28, 34, 35)
7. Do each of the following (32, 37):
- (a) If f is continuous on $[a, c) \cup (c, b]$ then state the definition of $\int_a^b f(x) dx$. That is, how do you integrate over a discontinuity? You may assume the usual definition for integrals of continuous functions has been established.
- (b) Evaluate $\int_0^2 \frac{1}{(x-1)^2} dx$.
8. Do each of the following (41, 43, 45):
- (a) State the definition of the limit of a sequence: $\lim_{n \rightarrow \infty} a_n = L$.
- (b) State the definition of the sum of a series: $\sum_{n=1}^{\infty} a_n = S$.
- (c) Use the integral test to show that the harmonic series $\sum_{n=1}^{\infty} \frac{1}{n}$ diverges.
9. Do each of the following (46):
- (a) For a given x value, the power series $\sum_{n=0}^{\infty} c_n(x-a)^n$ may converge conditionally, converge absolutely, or diverge. Describe the possible behavior of this series (i.e., on what types of sets might the series converge conditionally, converge absolutely, or diverge)?
- (b) What is the radius of convergence of $\sum_{n=0}^{\infty} \frac{3^n x^n}{n!}$?
10. Compute the Taylor series for $\ln x$ centered at $a = 1$. What is the radius of convergence? (31, 46, 47)
