LINEAR ALGEBRA COMPREHENSIVE EXAM

Fall 2012, Prepared by Dr. Robert Gardner September 14, 2012

NAME ______ Start time: _____ End time: _____ Be clear and **give all details**. Use all symbols correctly (such as equal signs). The bold faced numbers in parentheses indicate the number of the topics covered in that problem from the Study Guide. **No calculators!!!** You may omit two numbered problems. Indicate which two problems you are omitting: _____ and ____.

1. Find the solution set of $A\vec{x} = \vec{b}$ where

$$A = \begin{bmatrix} 1 & -4 & 1 \\ 3 & -13 & 0 \\ 2 & -9 & -1 \end{bmatrix} \text{ and } \vec{b} = \begin{bmatrix} -2 \\ -10 \\ -8 \end{bmatrix}$$

and express the solution as a translation of a vector space. (A1, A7, B4)

- 2. Give three conditions on $n \times n$ matrix A which would (each) imply that the system $A\vec{x} = \vec{b}$ has a unique solution. Give two conditions which would (each) imply that $A\vec{x} = \vec{b}$ has multiple solutions. (A5, A8, A9)
- 3. Show that the vectors $\sin x$ and $\cos x$ are orthogonal in the inner product space $C_{0,2\pi}$ of continuous functions on $[0, 2\pi]$ with the inner product of f and g defined as

$$\langle f,g \rangle = \int_0^{2\pi} f(x)g(x) \, dx.$$

(B8, B9, C15)

- 4. Find the projection of vector [1, 2, 3, 4] onto the line joining the points (0, 4, −3, 2) and (1, 4, 0, 2). (**B3, B7, B8, C17**)
- 5. Find the standard matrix representation (i.e. the representation with respect to the standard bases of \mathbb{R}^m and \mathbb{R}^n) of the linear transformation $T : \mathbb{R}^3 \to \mathbb{R}^4$ defined by $T((x_1, x_2, x_3)) = (x_1 + x_2, x_2 + x_3, x_3 + x_1, x_1 + x_2 + x_3)$. (C7, C8)
- 6. Consider the space \mathcal{P}_3 of all polynomials of degree 3 or less. Find the coordinate vector of $x^3 + 3x^2 4x + 2$ relative to the ordered basis $(x, x^2 1, x^3, 2x^2)$. (C11, C6, A1).
- 7. Transform the basis $\{(1,0,1), (0,1,2), (2,1,0)\}$ for \mathbb{R}^3 into an orthogonal basis using the Gram-Schmidt process. (C17, C19, C20, C21)
- 8. Express A and A^{-1} as products of elementary matrices where

$$A = \left[\begin{array}{cc} 2 & 9 \\ 1 & 4 \end{array} \right].$$

(D3, D7, D8, D9)

- 9. Prove that if λ is an eigenvalue of an $n \times n$ matrix A, then the set E_{λ} consisting of the zero vector together with all eigenvectors of A for this eigenvalue λ is a subspace of *n*-space. (C4, D17, D19)
- 10. Diagonalize $A = \begin{bmatrix} 7 & 8 \\ -4 & -5 \end{bmatrix}$ and calculate A^{100} . (D1, D17, D20)
