

# LINEAR ALGEBRA COMPREHENSIVE EXAM

Fall 2019a, Prepared by Dr. Robert Gardner

September 13, 2019

NAME \_\_\_\_\_ STUDENT NUMBER \_\_\_\_\_

Be clear and **give all details**. Use all symbols correctly (such as equal signs). The numbers in bold faced parentheses indicate the number of the topics covered in that problem from the Study Guide. **No calculators and turn off your cell phones!** Use the paper provided and **only write on one side**.

You may omit two problems. Indicate which two problems you are omitting: \_\_\_\_\_ and \_\_\_\_\_. There is a three hour time limit.

1. Find the solution set of  $A\vec{x} = \vec{b}$  where

$$A = \begin{bmatrix} 1 & -4 & 1 \\ 3 & -13 & 0 \\ 2 & -9 & -1 \end{bmatrix} \text{ and } \vec{b} = \begin{bmatrix} -2 \\ -10 \\ -8 \end{bmatrix}$$

and express the solution as a translation of a vector space. (**A1, A7, B4**)

2. State three conditions on  $n \times n$  matrix  $A$  which would (each) imply that the system  $A\vec{x} = \vec{b}$  has a unique solution. Does the system

$$\begin{bmatrix} 2 & 4 & -2 \\ 4 & 8 & 3 \\ -1 & -3 & 0 \end{bmatrix} \vec{x} = \vec{0}$$

have a unique solution (explain)? (**A5, 8, A9**)

3. Consider the plane in  $\mathbb{R}^3$  which contains the vectors  $[1, 2, 3]$  and  $[4, 5, 6]$  and passes through the point  $(7, 8, 9)$ . Find the equation of the plane (in terms of  $x$ ,  $y$  and  $z$  coordinates) and express the plane as a translation of a vector space. (**B4, B12**)
4. State the “Fundamental Theorem of Finite Dimensional Vector Spaces” (which deals with isomorphisms of vector spaces). Let  $V_1$  and  $V_2$  be vector spaces with real scalars. What conditions must be satisfied for  $\pi : V_1 \rightarrow V_2$  to be an isomorphism? Are the vector spaces  $\mathbb{R}^n$  and  $\mathbb{C}^n$  isomorphic? Explain. (**B4, B12**)

5. Show that the vectors  $\sin x$  and  $\cos x$  are orthogonal in the inner product space  $C_{0,2\pi}$  of continuous functions on  $[0, 2\pi]$  with the inner product of  $f$  and  $g$  defined as

$$\langle f, g \rangle = \int_0^{2\pi} f(x)g(x) dx.$$

(**B8, B9, C15**)

6. Show that the vector space

$$V = \{m + a \cos(x) + b \sin(x) \mid m, a, b \in \mathbb{R}\}$$

is isomorphic to  $\mathbb{R}^3$  (actually construct the isomorphism). (**C12, C13, C15**)

7. Let  $A$  be an  $n \times n$  matrix. Prove that the collection of all solutions to the equation  $A\vec{x} = \vec{0}$  form a subspace of  $\mathbb{R}^n$ . (**A9, C2, C4**)

8. Use the Gram-Schmidt process to find an orthonormal basis for the subspace  $\text{span}\{[1, 2, 0, 2], [2, 1, 1, 1], [1, 0, 1, 1]\}$  of  $\mathbb{R}^4$ . (**C17, C19, C20, C21**)

9. (a) What is an elementary matrix? (**D7**)

(b) Express  $A$  and  $A^{-1}$  as a product of elementary matrices where  $A = \begin{bmatrix} 2 & 0 \\ 1 & 4 \end{bmatrix}$ . (**D3, D7, D8, D9**)

10. Find the eigenvalues and eigenvectors of  $A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$ . What are the eigenspaces? (**D12, D17, D18, D19**)
